Rafly

We create reliable stock records for independent shops, then turn approved surplus into sales.

Best Startup Project

Enterprise solutions

Tashkent, Uzbekistan

31 August 2026

A shop loses money when stock lives in someone's head.

01 Stock truth lives in the owner's head, a salesperson's memory, or a notebook.

02 Expiry and mismatches are noticed late. Loss is absorbed without measurement.

03 The shop cannot close for a clean-up week without risking customers moving next door.

50 shops in the launch cohort

Rafly's launch cohort covers 50 shops. They need fast full inventory, stock monitoring and analytics without dependence on a POS.

Source: agreements with 50 shops, Rafly launch cohort as of 31 August 2026.

A POS ASSUMES

Catalogue and movements are maintained every day

This segment often has no process owner. Partial implementation turns a number into decoration.

Break: implementation and discipline

A SPREADSHEET ASSUMES

Someone updates the file and resolves mismatches

Ownership is unclear, decisions have no audit trail, and versions diverge.

Break: data owner and audit

A MARKETPLACE ASSUMES

The shop already knows what and how much it can sell

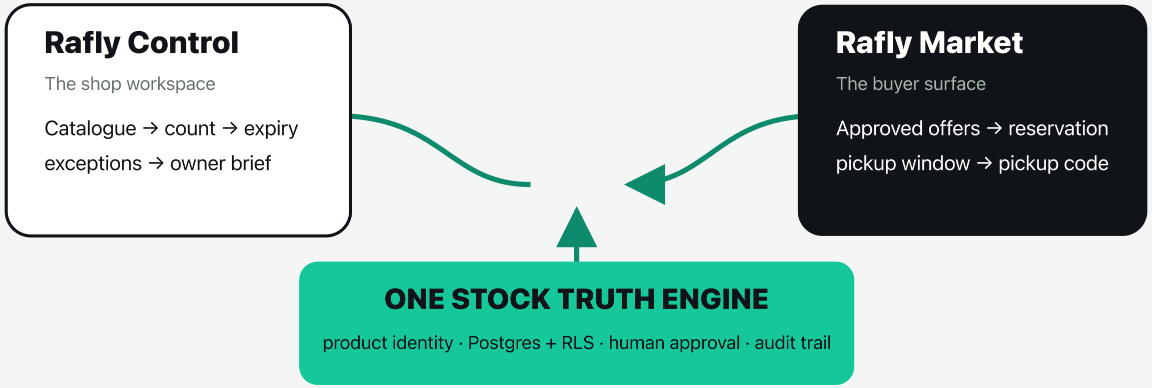
If surplus is unseen and not physically set aside, the public offer is unreliable.

Break: reliable stock

You cannot sell surplus you cannot see.

Stock truth is the product. The marketplace is the consequence.

Control creates the record. Market sells only what was approved.



Store Control Sprint: a paid turnkey launch in 7-10 days

An operator rebuilds the stock-control loop without closing the shop, then hands the daily routine to staff.

DAYS 0–1

Scope, roles, shelf zones, source data and access rules.

DAYS 2–4

Reviewed catalogue. Fast full inventory across every stock zone.

DAYS 5–6

Expiry, removal actions, supplier follow-up and open exceptions.

DAYS 7–8

Physical set-aside. A manager approves the first traceable offer.

DAYS 9–10

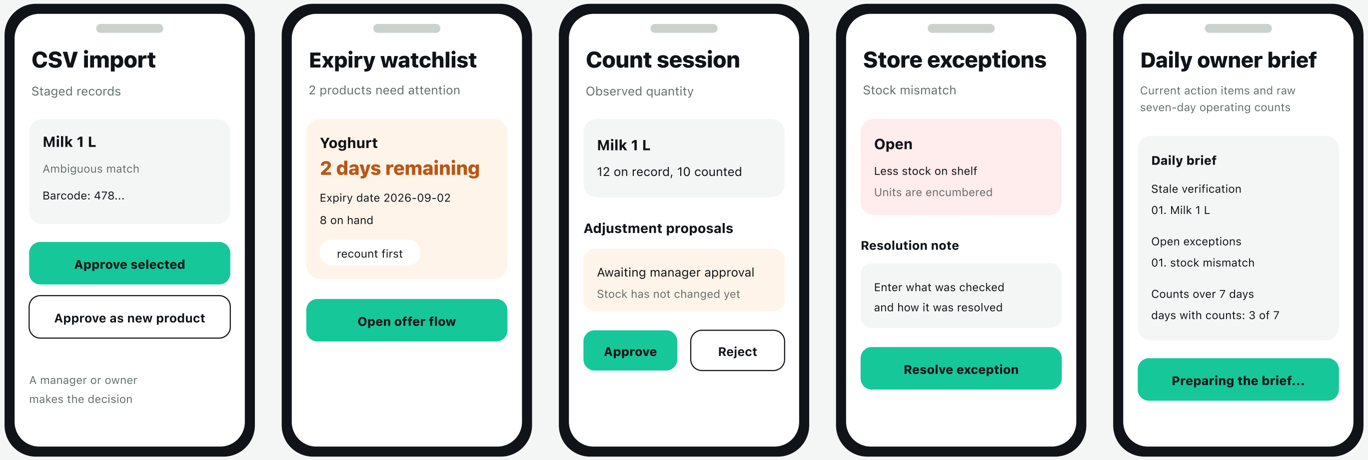
Owner brief, training, acceptance and the next control date.

THE SHOP KEEPS A live catalogue, full count, expiry and exception queues, roles, decision history, owner brief and an approved publication workflow.

Source: Store Control Sprint Playbook, version dated 31 August 2026. Paid launch format for the cohort.

Control is a sequence of five human decisions

Copy is taken from the current English interface. Values inside the frames are examples.



1. CATALOGUE   2. EXPIRY   3. COUNT   4. EXCEPTIONS   5. BRIEF

Interface copy source: i18n/seller.ts and the current formatDigestRu test in the repository.

In ten days, the shop sees all stock and controls it every day.

Rafly owns the launch and leaves the owner with a working system.

01

Catalogue rebuilt. Products are recovered from whatever source data exists.

02

Full inventory done. Every stock zone is counted quickly.

03

Monitoring live. Stock, expiry and exceptions share one control loop.

04

Analytics live. The owner gets a daily brief and priorities.

05

Staff trained. Roles, decisions and the next control date are assigned.

SPRINT OUTCOME Working stock control that launches with any POS or no POS, supported turnkey by Rafly.

The owner buys control with an author behind every decision.

1. SIGNAL

CSV, image, OCR, POS input or observation forms the input.

→

2. ACTION

Rafly surfaces a match, risk, mismatch or task.

→

3. DECISION

A named employee accepts the action and owns it.

→

4. AUDIT

Stock and offers carry actor, time, quantity and state history.

Traceability turns a number into a managed asset.

- Every count, exception and offer belongs to a named employee.
- The owner sees the source signal, decision, time and current state.
- The buyer sees only an approved offer with confirmed quantity.

Rafly architecture: named decisions and a complete audit trail from shelf to buyer.

The latest recorded run verifies the product from interface to Postgres.

LAYER	WHAT WAS VERIFIED	RESULT
Backend	195 integration tests against real local Supabase	✓ passed
Frontend	693 tests	✓ passed
Types	Strict TypeScript typecheck	✓ clean
Lint	Static code analysis	✓ clean
Fresh database	`supabase db reset` and 11 additive migrations	✓ clean
Conformance	Unmodified suites against both an in-memory fake and real Postgres	✓ passed

OFFICIAL BASE, 2024

227,910 retail-trade organisations

Across Uzbekistan. Tashkent city has 40,619. Rafly starts with independent grocery and convenience shops.

Base plan after segment filters

TAM	**47,462 shops**, UZS 387.3bn annual recurring revenue. Plan.
SAM	**8,459 Tashkent shops**, UZS 69.0bn annual recurring revenue. Plan.
SOM	**346.7 active shops** after 24 months, UZS 2.829bn annual recurring revenue. Capacity plan.

Base-plan filters: 35% grocery format, 85% independent shops, 70% without maintained digital stock.

Official base: National Statistics Committee of Uzbekistan, SIAT 1.07.02.0030, 2024 data, updated 8 July 2025. TAM, SAM and SOM: Rafly base plan.

1. Store Control Sprint

One-time implementation, count, training and handover fee.

2. Control

Monthly workspace, owner brief and operating support subscription.

3. Market

Take rate only on completed sales of approved offers.

Base-plan contribution from one shop

Sprint: 1,500,000 − 560,000 operator work − 150,000 travel and materials − 200,000 acquisition = UZS 590,000

Control: 500,000 − 70,000 support − 50,000 infrastructure = UZS 380,000 per month

Market: 3,000,000 GMV × 10% − 2% GMV variable cost = UZS 240,000 per month

First-month contribution with Market = UZS 1,210,000, plan

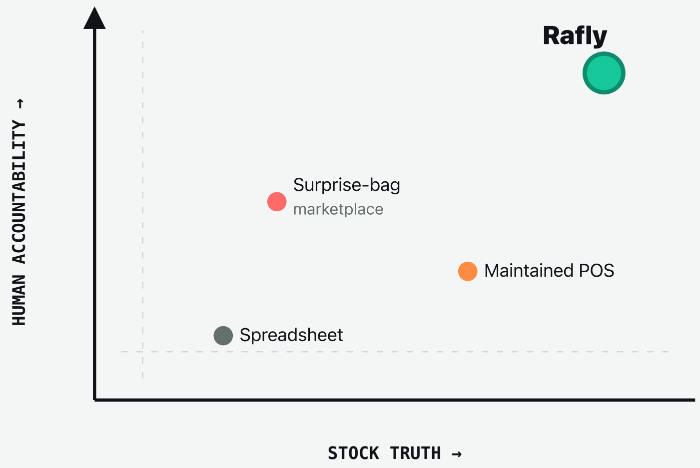
Store Control Sprint is the paid implementation. Control and Market scale the shop relationship.

Source: Rafly financial model dated 31 August 2026. Every amount on this slide is a base-plan figure.

We own the layer beneath the marketplace.

> **Rafly's defensible position is traceable stock truth before surplus becomes public.**

A POS stores data. A marketplace publishes an offer. Rafly creates reliable stock, accountability and a sales channel on one core.



Strategic category map across stock truth and decision accountability.

AI LAYER 01

Camera-based AI inventory

The shelf counts itself: computer vision continuously reconciles fact against records, a person only approves.

AFTER COHORT LAUNCH

AI LAYER 02

Sell-through analytics

Demand forecast per product: what moves, what stalls, and where the shop loses margin.

AFTER COHORT LAUNCH

AI LAYER 03

Purchasing advisor

Data-driven advice on what and when to reorder: sales history and expiry turn into a supplier order plan.

AFTER COHORT LAUNCH

Rafly roadmap. The AI layer runs on the stock-truth data Control creates from day one.

50 shops have agreed to launch with Rafly.

- **Launching now.** These shops form the first operating cohort.
- The pilot covers stock monitoring and stock analytics.
- The commercial entry is the paid 7-10 day Store Control Sprint.

What every shop gets

ANY POS	Rafly works with what the shop already has, including no POS.
FULL COUNT	Fast full inventory of all stock is included in the launch.
MONITORING	Stock, expiry and exceptions enter a daily operating loop.
TURNKEY	Rafly rebuilds the catalogue, trains staff and runs the launch end to end.

Source: agreements with 50 shops and pilot launch terms, confirmed by the founder on 31 August 2026.

The team connects sales, engineering and shop launches.

REQUIRED ACCOUNTABILITY	NAME AND ACTUAL ROLE	ONE LINE OF RELEVANT BACKGROUND
Founder / CEO	[Name, actual role]	[Launch and retail-relevant background]
Product + Engineering	[Name, actual role]	[What they built in Rafly]
Pilot Operations	[Name, actual role]	[Field implementation, training, process]
Retail / Commercial	[Name, or combine with a role above]	[Independent retail experience and access]
Finance / Legal	[Name, or combine with founder]	[Model, contracts, compliance]

TRACK FORMAT Best Startup Project requires a team of 3 to 8 people. Rafly has a registered legal entity.

Requirements source: awards.gov.uz, President Tech Award 2026. The founder confirms the registered legal entity.

TRANCHE 01

Shop launches

35% OF PLAN

Inventory, travel, materials, training and Store Control Sprint quality control.

Unlocks: fast launch of the first wave from the 50-shop cohort.

TRANCHE 02

Engineering

35% OF PLAN

Reliability, observability, recovery, security and field-workflow speed.

Unlocks: a resilient platform for concurrent shop launches.

TRANCHE 03

Field team and readiness

30% OF PLAN

Operators, support, sales, contracts and operating readiness for scale.

Unlocks: repeatable turnkey launches under one quality standard.

Track fund: USD 2.5m. Prizes: USD 125,000, 75,000 and 50,000. Source: awards.gov.uz, President Tech Award 2026. Rafly allocation is a plan.

50 shops are launching now. Rafly turns their stock into a managed asset.
