

Rafly

The shop that knows its shelf, and earns from it

CONTROL

MARKET

AI

Every evening a shop **loses money in silence**

EVERY EVENING

Stock lives in a head

The shop's only database walks home with the owner every night.

Expiry is a surprise

Dates live on labels. They surface when it's too late to sell.

Losses are invisible

What isn't counted doesn't exist. Until the next stocktake.

Invisible
doesn't sell.

Visible **sells.**

Rafly makes surplus visible before it becomes a loss

The shelf turns **into revenue**

ONE SYSTEM

Rafly Control

The shop's workspace: a live catalogue, recounts, expiry, exceptions, the owner's brief.

Rafly Market

A storefront of verified offers: booking, a pickup window, a pickup code.

ONE ENGINE OF STOCK TRUTH

A catalogue **in one import**

NO POS NEEDED

From any data

A supplier sheet, a till export, a paper notebook. Rafly matches the rows itself.

Ambiguity goes to a human

Look-alike products are never merged silently. A doubtful row waits for the manager.

Any POS. Any shop. Zero friction.

TURNKEY

Grocery

Bakery

Minimarket

Deli

Kiosk

Any POS — or none

Rafly works on top of whatever till the shop already has. No integration project, no replacement, no downtime.

Connected by our team

Data extraction, catalogue build and staff training are done for you. Live in 7–10 days, turnkey.

The shelf becomes **a fact**

RECOUNT

6 of 6

units confirmed by a physical recount

CONFIDENCE GROWS — THE OFFER LIMIT UNLOCKS

The system tells you **what to discount today**

12,000 UZS ~~24,000~~

Pickup 18:00–21:00 · 3 left · Code issued after booking

Book now

Only what the shop has **verified by hand** reaches the Market.

No unit ever sells twice

DEAL PROTECTION

Exception

A count mismatch pauses the deal.

Reserve frozen

The unit stays locked until a decision.

Camera witness

Computer vision records the change.

A human decides

A mandatory note. The trail stays forever.

The whole shop in one morning message

AUTO ANALYTICS

offer approved

1

reservation fulfilled

1

exception closed

Plus weekly metrics and daily priorities, Telegram-ready. **Decisions take minutes.**

Shop data powers **the digital market**

FLYWHEEL

Shops

Verified stock

Analytics

Digital Market

Every shop feeds it

Recounts, expiry and decisions stream in from each connected shop.

Analytics refines it

The platform turns raw shelf data into demand, risk and pricing signals.

The market sells it

Verified surplus flows into one digital storefront buyers can trust.

More shops → more data → **a stronger market for everyone.**

Next: the Rafly AI layer

ROADMAP

Camera-based AI inventory

The shelf counts itself: vision reconciles fact against records continuously, a human approves.

Sell-through analytics

A demand forecast per product: what moves, what stalls, where margin leaks.

Purchasing advisor

Data-driven reorder advice: sales history and expiry become a supplier order plan.

The foundation already works: **stock truth** from these ten steps.

Others store data. **Raflly creates truth.**

VS ALTERNATIVES

Spreadsheets

Store guesses. No recount, no accountability, no sales channel.

POS systems

Store transactions, and only when maintained. The shelf stays unverified.

Surprise-bag apps

Publish offers on top of stock nobody verified. Trust breaks at pickup.

Raflly

Verified stock, human accountability and a sales channel — on one core.

We own the layer **beneath** the marketplace: stock truth before anything goes public.

Where the investment **goes**

USE OF FUNDS

35%

Shop launches

Inventory sprints, field visits, training and QA for the first wave of the cohort.

35%

Engineering & AI

Reliability, speed, observability, and the AI layer: cameras, forecasting, reorder advice.

30%

Field team & readiness

Operators, support and sales that make every turnkey launch repeatable.

MILESTONE-BASED TRANCHES, EACH UNLOCKS THE NEXT
